

Biology 11C Students,

Here are the instructions for completing the assignments in the Course Guide.

The images and information to complete the work in your course guide are on the website under the Biology 11C link. Click on the "Download Exercises for Course Guide" to get the second screen below. Read the Instructions and then download the PowerPoints for the three exercises to your hard drive. You must download them, it will not work online. The two PowerPoint presentations match the sections in your course guide. Be aware that the food web exercise works only on a PC platform, or multiplatform Mac.

Be sure to complete all the exercises in the course guide well before the field study. There will be a quiz on your preparation on Friday night.
